Interpretation

Distraction Index (DI):The laxity ranking is based on the hip with the greater laxity (larger DI). In this case the DI used is 0.25.
OA Risk Category:The DI is less than or equal to 0.30. This patient is at minimal risk for hip OA.
Distraction Index Chart:

Breed Statistics:This interpretation is based on a cross-section of 828 canine patients of the WIREHAISED POINTING GRIFFON breed in the AIS PennHIP database. The gray strip represents the central 90% range of DIs (0.23 - 0.68) for the breed. The breed average DI is 0.39 (solid square). The patient DI is the solid circle (0.25).

Summary:The degree of laxity (DI = 0.25) falls within the central 90% range of DIs for the breed. This amount of hip laxity places hip at a minimal risk to develop hip OA. No radiographic evidence of OA for either hip.
